

# Environmental + Natural Resources Law

Providing strategic and cost-effective counsel, we assist our clients in meeting state and federal environmental permitting obligations. Our lawyers evaluate and defend administrative, civil and criminal enforcement actions, evaluate environmental liabilities and risk allocations associated with corporate and property transactions, coordinate legislative and administrative lawmaking, and facilitate real estate development and redevelopment.

We are dedicated to understanding our clients' business objectives and to providing timely and sound legal advice to support these efforts. We are heavily involved with the oil and gas industry in Ohio and remain very active in national and state industry associations relevant to our clients' businesses.

Our team regularly publishes articles and presents at trade association meetings, continuing legal education seminars and bar association committees. Five of the practice group's attorneys maintain an "AV" rating from Martindale-Hubbell, one of the oldest and most trusted peer review services in the legal profession. Practice leader Scott Doran earned his master's degree in toxicology, works closely with our clients' technical consultants to develop strong and defensible strategies, and has been recognized by Chambers and Partners as a top environmental practitioner in Ohio.

## Our Services

- + Environmental compliance, permitting and administrative appeals
- + Land development and redevelopment
- + Oil and gas development, production and transmission
